Database :

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

-!- FUNCTION: CURLIN IS THE STRUCTURAL SUBUNIT OF THE CURLI.
-COLLED SURFACE STRUCTURES THAT ASSEMBLE PREFERENTIALLY A
TEMPERATURES BELOW 37 DEGREES CELSIUS. CURLI CAN BIND TO
FIBRONECTIN.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        MEDLINE=97061202; PubMed=8905232;

FUNCTION: CURLIN IS THE STRUCTURAL SUBUNIT OF THE CURLI. CURLICULED SURFACE STRUCTURES THAT ASSEMBLE PREFERNTIALLY AT GROY TEMPERATURES BELOW 37 DEGREES CELSIUS. CURLI CAN BIND TO FIBRONECTIN. THE MINOR SUBUNIT IS THE NUCLEATION COMPONENT OF
CURLIN MONOMERS.
SIMILARITY: BELONGS TO THE CSGA/CSGB FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     8:11-22(2001).

                                   FUNCTION: REQUIRED FOR SURVIVAL AND DIFFERENTIATION OF ILINE CELLS. PLAYS A ROLE IN GERM LINE SEX DETERMINATION.
SUBCELLILAR LOCATION: Nuclear (potential).

DEVELOPMENTAL STAGE: FIRST APPEARS IN THE GERMARIUM AND ACCUMULATES IN NURSE CELLS DURING COGENESIS. STORED IN THE IS RAPIDLY LOST IN THE EMBRYOS EXCEPT FOR ITS CONTINGRESING IN THE GERM LINE PRECURSOR POLE CELLS.

SIMILARITY: Contains 4 C2H2-type zinc fingers.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  human telomeres.";
1. Cell. Biol. 22:332-342(2002).
- FUNCTION: May regulate vesicle
                                                                                                                                                                                                                                         PTM: Upon insulin-stimulation, phosphorylated on serine residues by MAPK kinases.

PTM: ADD-ribosylated (-auto).

SIMILARITY: Belongs to the PARP family.

SIMILARITY: Contains 15 ANK repeats.

SIMILARITY: Contains 1 sterile alpha motif (SAM) domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          nicotinamide + {ADP-D-ribosyl} (N+1)-acceptor.

SUBUNIT: Oligomerizes and associates with TNKS2. Interacts with the cytoplasmic domain of the TNESP/Otase in SLC2A4/GLU74-vesicles. Binds to the N-terminus of telomeric TRF1 via the ANK repeats. SUBCELLULAR LOCATION: Cytoplasmic, associated with the Golgi an with juxtanuclear SLC2A4/GLU74-vesicles. A minor proportion is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               also found at nuclear pore complexes and around the pericentriolar matrix of mitotic centromeres. During interphase, a small fraction of TNKS is found in the nucleus, associated with TRF1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ALTERNATIVE PRODUCTS: Event=Alternative splicing; Named isoforms=2;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           FUNCTION: May regulate vesicle trafficking and modulate subcellular distribution of SLC2A4/GLUT4-vesicles. Has I
                                                                                                                                                                                                                                                                                                                                                                                                                            IsoId=095271-2; Sequence=VSP_004538, VSP_004539;
Note=No experimental confirmation available;
SSUE SPECIFICITY: Ubiquitous; highest levels in testis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           IsoId=095271-1; Sequence=Displayed;
